

Introduction

Introduction

The BOSC Community Library project has been developed as part of the BSCT 3221: Open Source Software Final Take-Home Examination. The project aims to demonstrate practical knowledge of open-source software development, collaborative GitHub workflows, repository governance, legal compliance, sustainability planning, and iterative software engineering practices. Throughout the development process, the system evolved from a simple static educational webpage into a responsive and interactive open-source platform featuring dynamic JSON-based resource management, category filtering, search functionality, responsive user interface design, statistics dashboards, and dark mode support.

The repository was managed using professional GitHub workflows including issue tracking, feature branching, pull requests, peer review simulation, structured commit history, and repository synchronization. Additional documentation such as contribution guidelines, legal analysis, sustainability strategies, government adoption proposals, and reflective governance discussions were also prepared to align the project with modern open-source community standards. This report presents the complete development lifecycle of the BOSC Community Library project, highlighting both the technical implementation and the professional open-source practices applied throughout the examination period.

My DAILY WORK PLAN

Day	Main Activity
Day 1	Repository setup + homepage
Day 2	GitHub templates + Code of Conduct
Day 3	Contributing guide + Issues
Day 4	PR Feature Enhancement #
Day 5	Refactoring
Day 6	Feature Enhancement #
Bug Fix	Bug Fix #1
Day 8	Legal + Sustainability documents
Day 9	Reflection + Submission log + screenshots

Though at the end I have compressed the days by

From https://github.com/stevenkiwanukakafero/BOSC-Community-Library
```

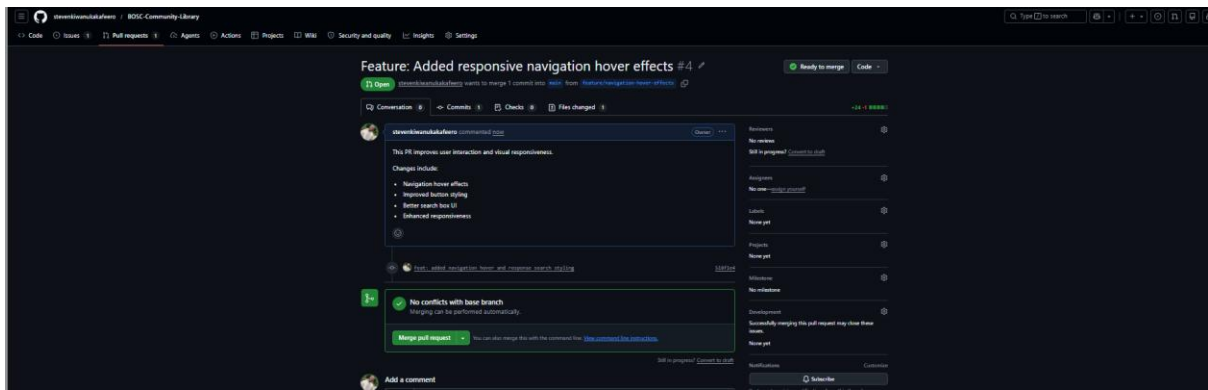

Then pulled the changes to sync them

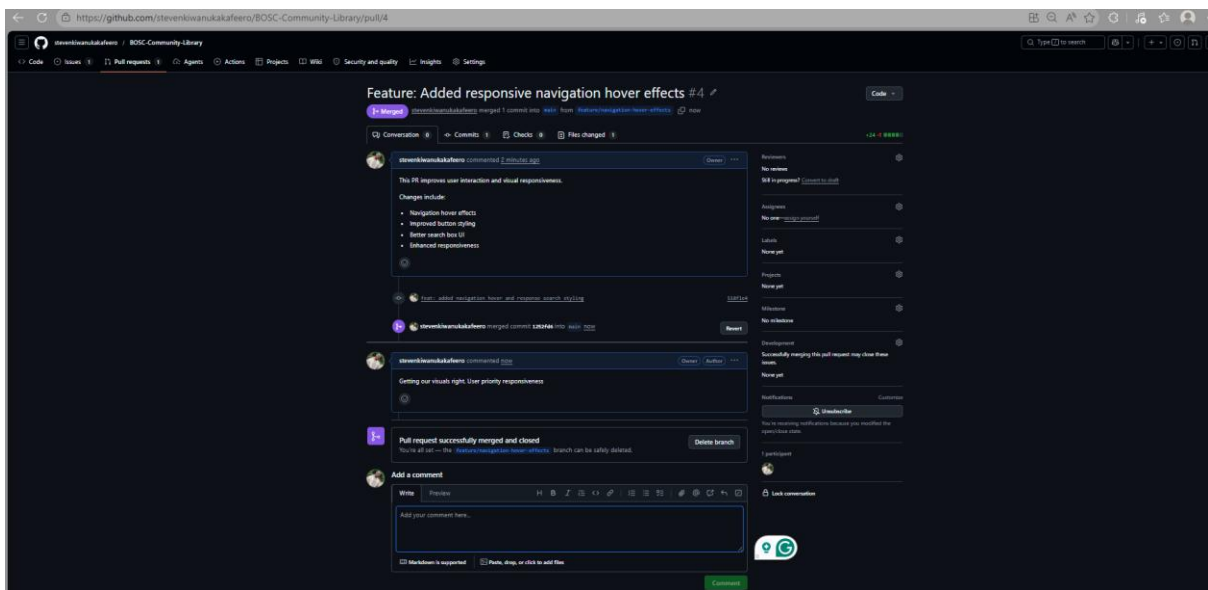

Open up issue 3: for Hover effect

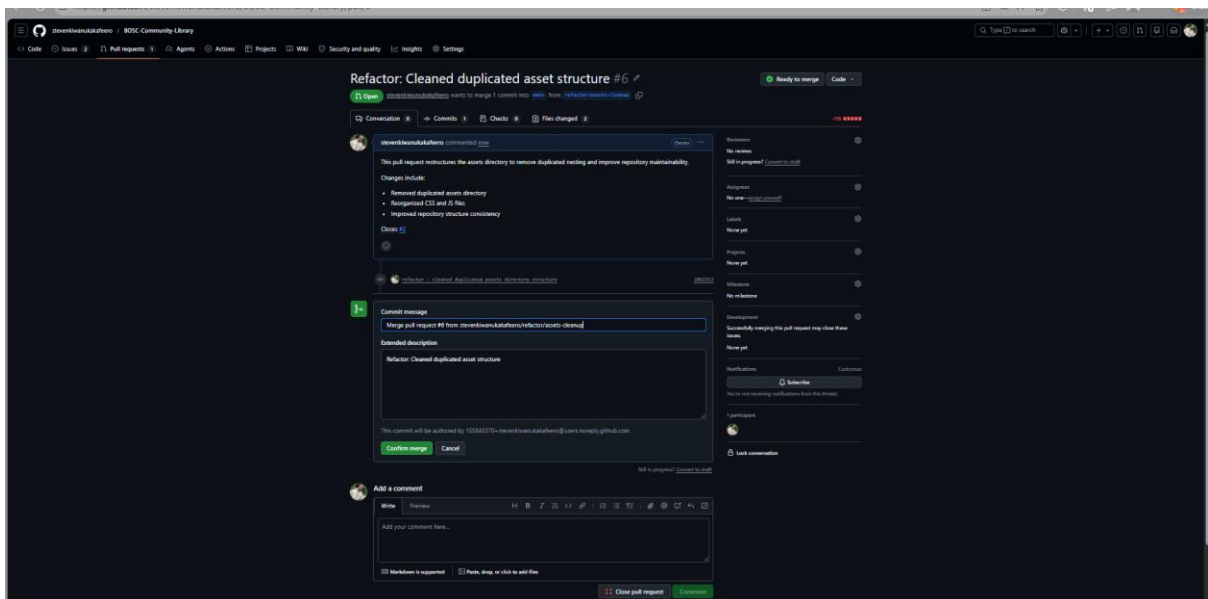

Pull request #4

Feature successfully added plus a comment

Added another refactor: Organising my file structure successfully and deleting duplicates

I have enhanced the UI and improved website interactivity and responsiveness. These included:

- Navigation hover effects
- Improved button styling
- Enhanced search form controls
- Interactive resource cards

Throughout the day, professional GitHub workflows were followed, including:

- Issue creation
- Branch management
- Commit versioning
- Pull request creation
- Peer review simulation
- Pull request merging

These activities contributed toward building a professional open-source software environment aligned with community governance and software maintenance standards.

DAY 3

Dynamic Resource Database

I shall Cover:

- stop hardcoding resources in JavaScript
- move resources into a JSON database
- dynamically load them using JavaScript fetch()

This makes my project:

- scalable
- cleaner
- more professional
- closer to real web systems

System Functionalities

- 1) JSON resource database
- 2) Dynamic loading of resources
- 3) Better search system
- 4) Dynamic resource cards
- 5) Category support
- 6) Cleaner JavaScript structure

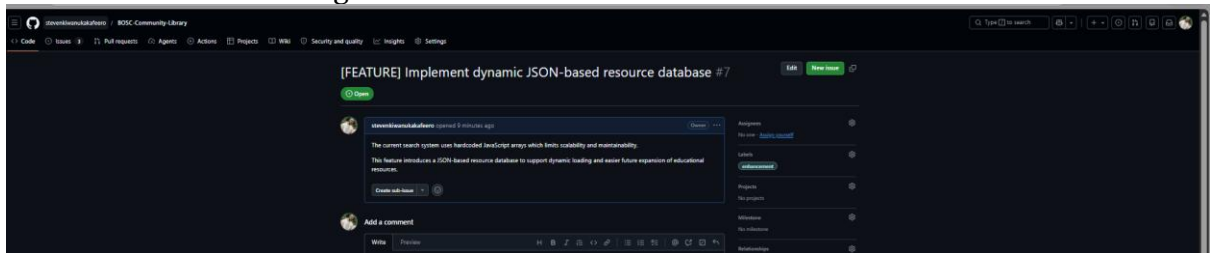

GitHub Workflow

- new issues
- new feature branches
- new pull requests
- professional commits
- peer review comments

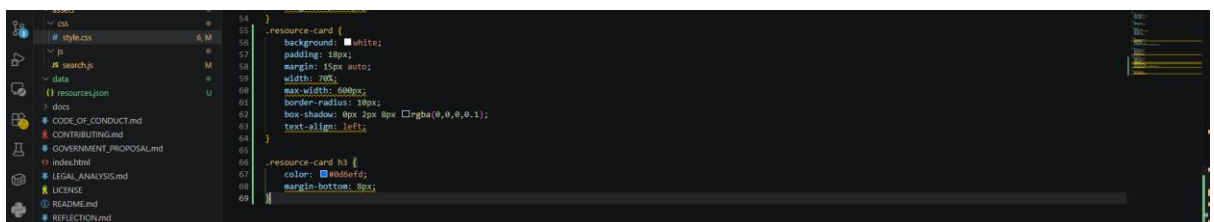

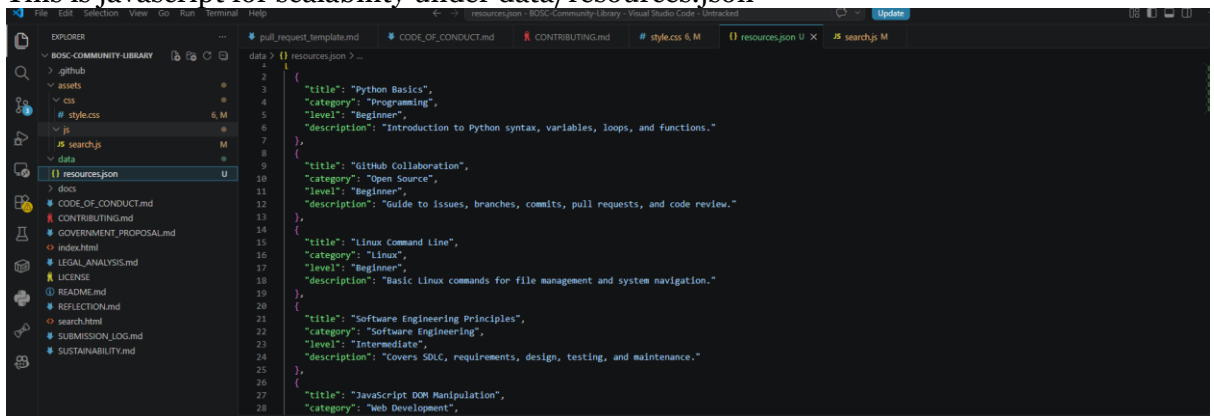

Synchronize Repositories to ensure local = online

```
PS C:\Users\Administrator\OneDrive\Desktop\BOSC-Community-Library> git checkout main
M
assets/css/style.css
Already on 'main'
PS C:\Users\Administrator\OneDrive\Desktop\BOSC-Community-Library> git pull origin main
From https://github.com/stevenkiwanukakafero/BOSC-Community-Library
* branch      main       -> FETCH_HEAD
Already up to date.
```

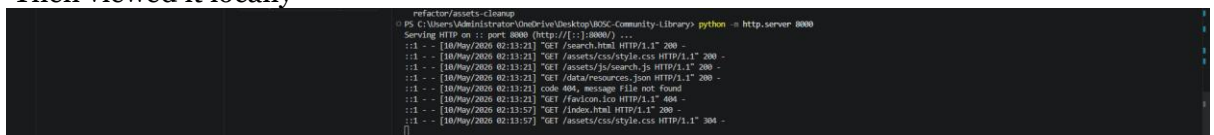

Then created an issue on github account

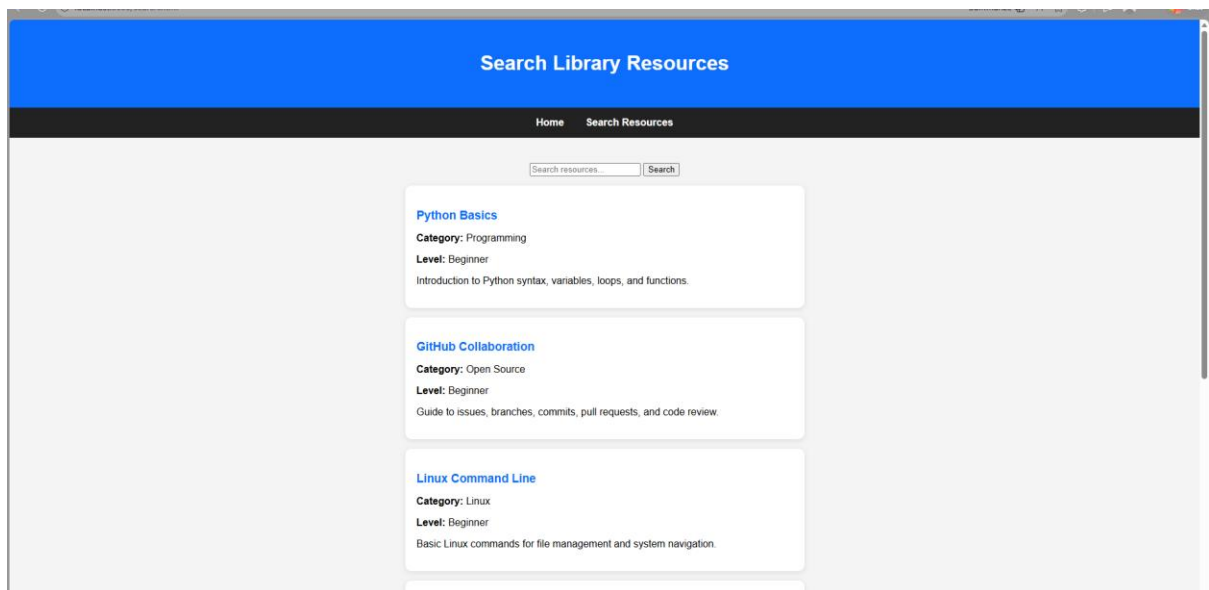

Added the cards for search bar and then styled.
This is javascript for scalability under data/resources.json

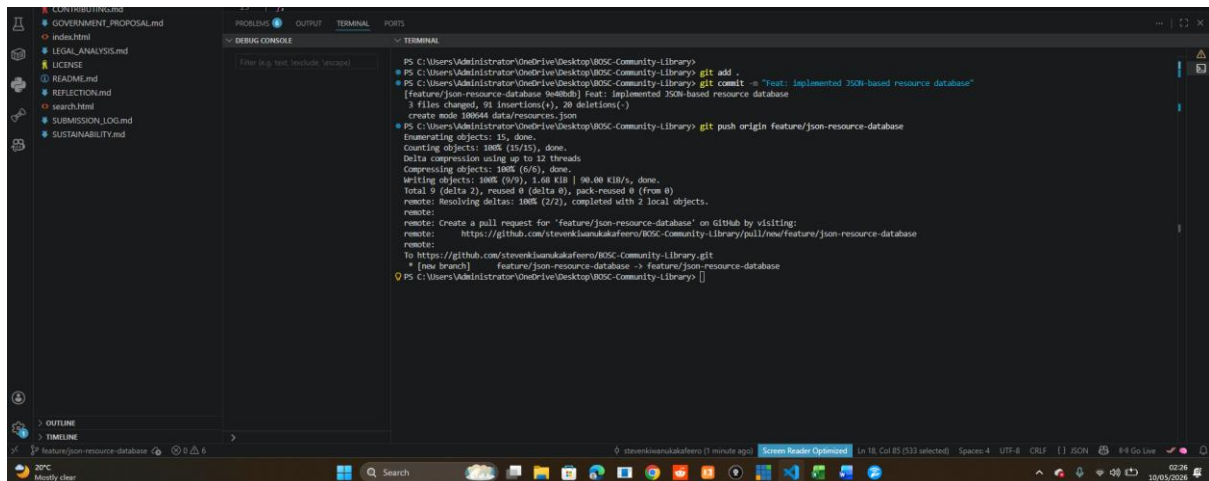

Then viewed it locally

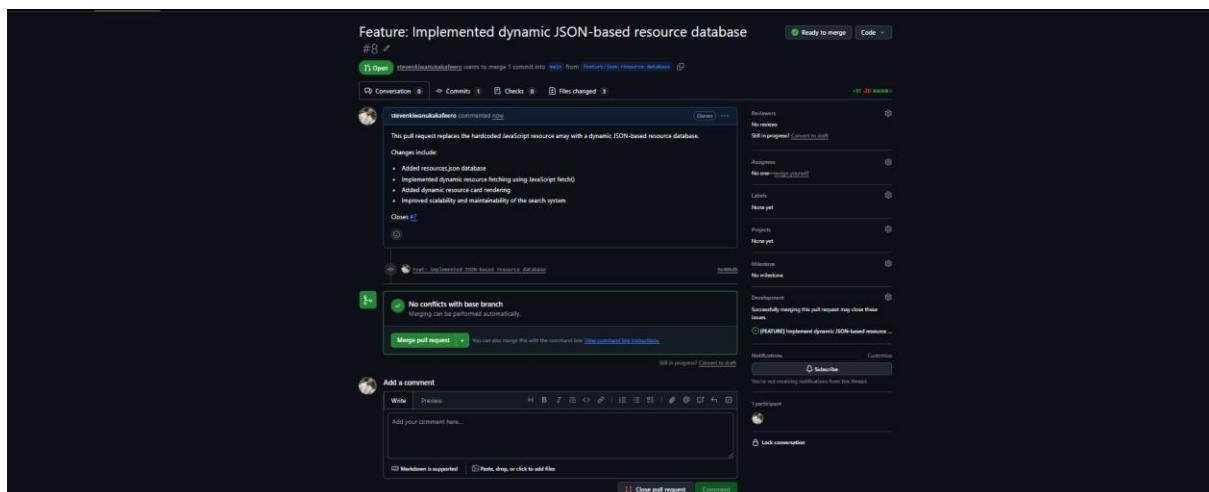

The tool search tool bar works well and verified

Then I have added and commit and pushed the changes

Then merged and closed the pull Request

This is one of the strongest technical improvements so far because my project now demonstrates:

Feature	Technology
Dynamic data loading	JavaScript fetch()
Structured data storage	JSON
Dynamic rendering	DOM manipulation
Search filtering	JavaScript
OSS workflow	GitHub PR workflow

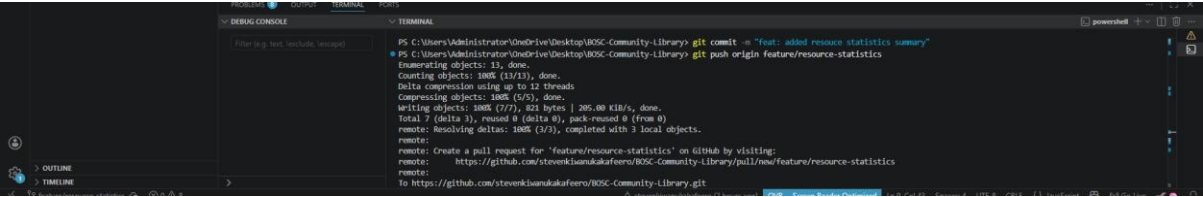

New issue

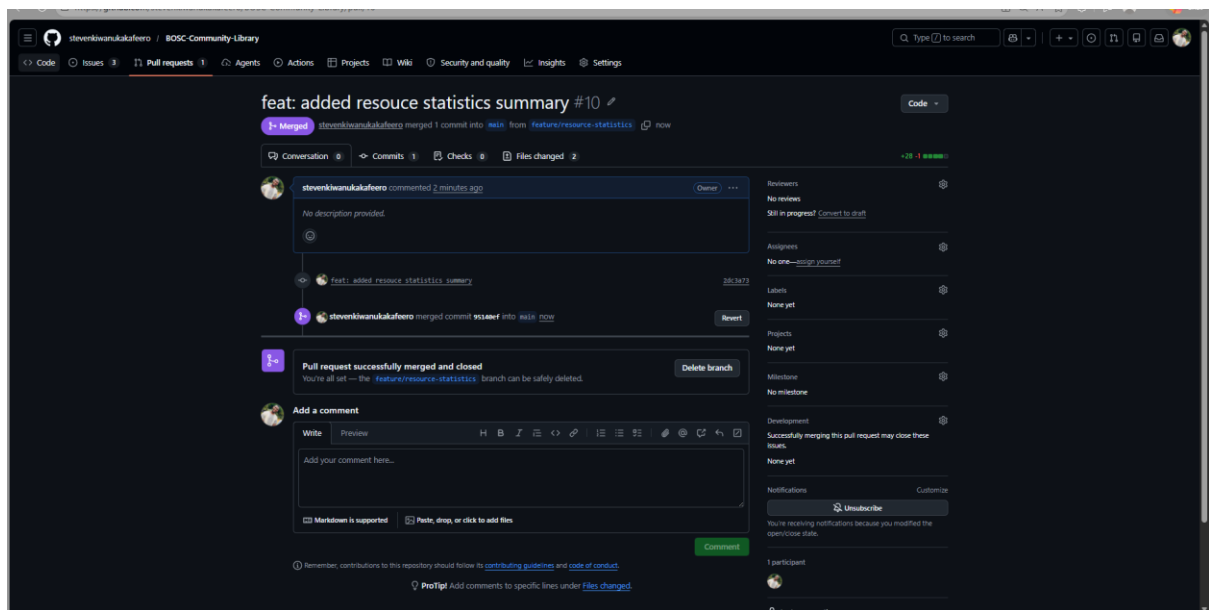

code

```
55 document.addEventListener("DOMContentLoaded", loadResources);
56
57 function displayStats() {
58   const stats = document.getElementById("stats");
59   const categories = [...new Set(resources.map(resource => resource.category))];
60
61   stats.innerHTML = `
62     <p><strong>Total Resources:</strong> ${resources.length}</p>
63     <p><strong>Categories:</strong> ${categories.length}</p>
64   `;
65 }
```

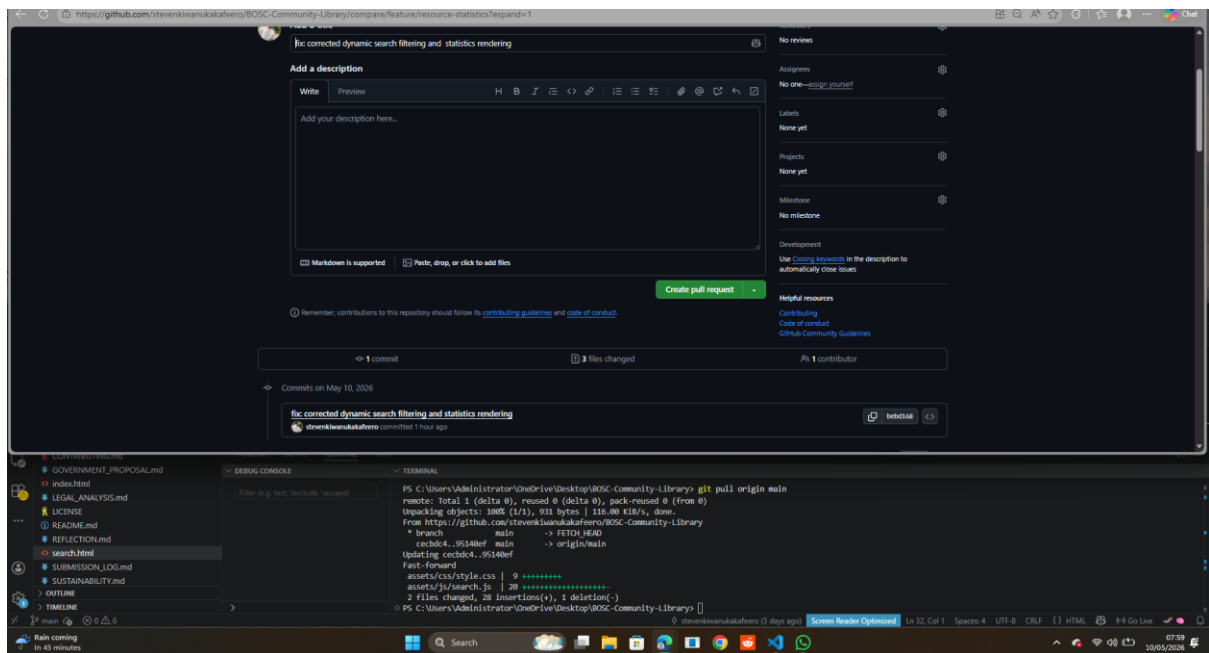

Committed and pushed the changes

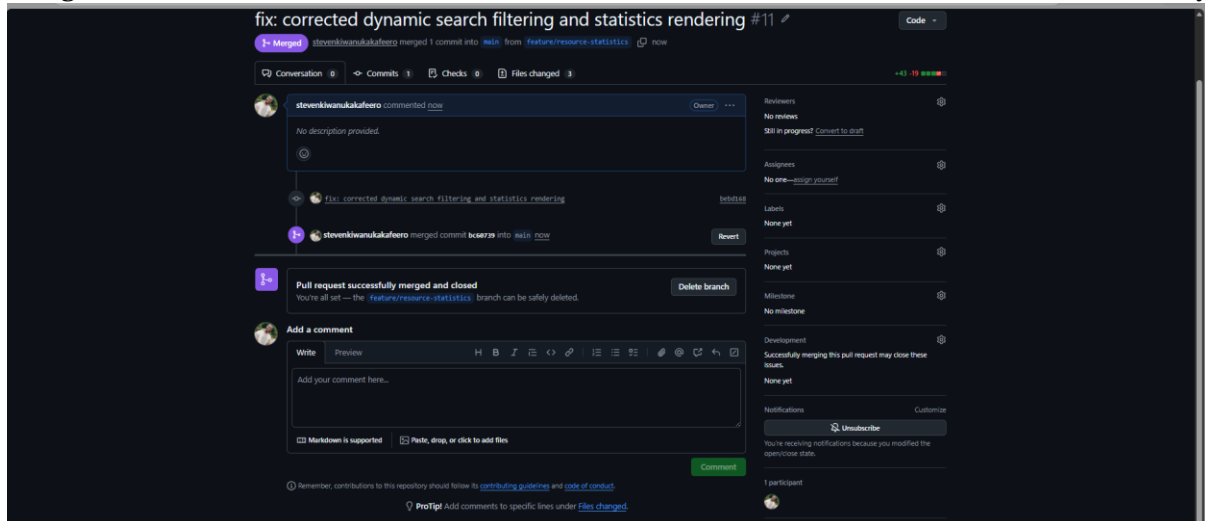

Then I have merged day

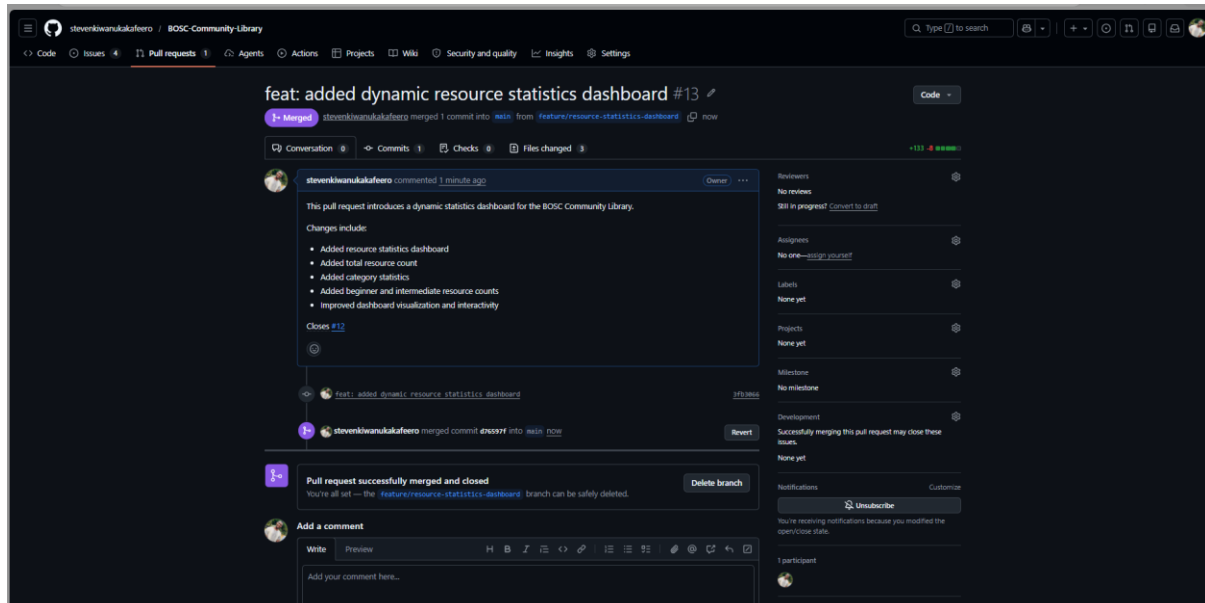

Creating another dynamic search filtering and statistics rendering

Merged and closed successfully

Added a dashboard feature

WHAT I HAVE ACHIEVED IN DAY 3

Core Technical Features

Dynamic	JSON	resource	database
JavaScript		fetch()	implementation
Dynamic		resource	rendering
Search			functionality
Category			filtering
Dynamic	statistics		dashboard
Resource			cards
Improved UI structure			

GitHub / OSS Workflow

Multiple	issues	created
Multiple	feature	branches
Professional	commit	history
Pull		requests
Peer	review	comments
Merged		PRs
Debugging and maintenance workflow		

DAY 4

UI/UX Professionalization & Advanced Frontend Features

Now I shall implement:

- ✓ the dynamic system works
- ✓ JSON database works
- ✓ filtering works
- ✓ dashboard works

Day 4, I will focus on making the platform:

- 🚀 modern
- 🚀 responsive
- 🚀 visually impressive
- 🚀 more interactive

1. Homepage Redesign

Then I improve:

- hero section
- cards
- layout
- project presentation

Goal:

make the homepage look like a real educational platform.

2. Dark Mode Toggle

Users can switch:

- Light mode
- Dark mode

This is a very modern frontend feature.

3. Responsive Mobile Layout

I optimize:

- dashboard
- cards
- navigation
- search controls

for smaller screens.

4. Dashboard Improvement

Then I enhance:

- stat card appearance
- spacing
- colors
- hover effects

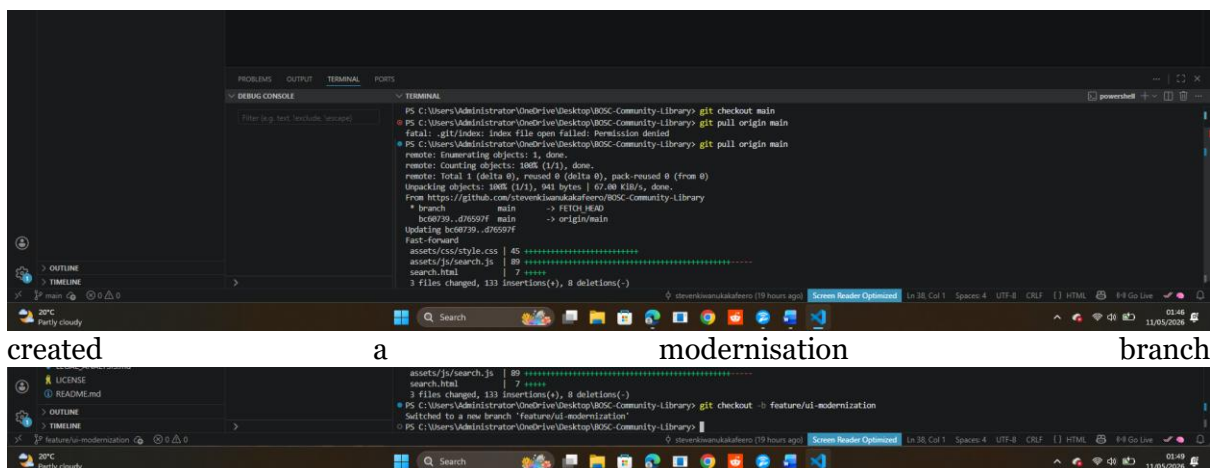

5. Then I shall add:

- smooth hover transitions
- card effects
- subtle animations

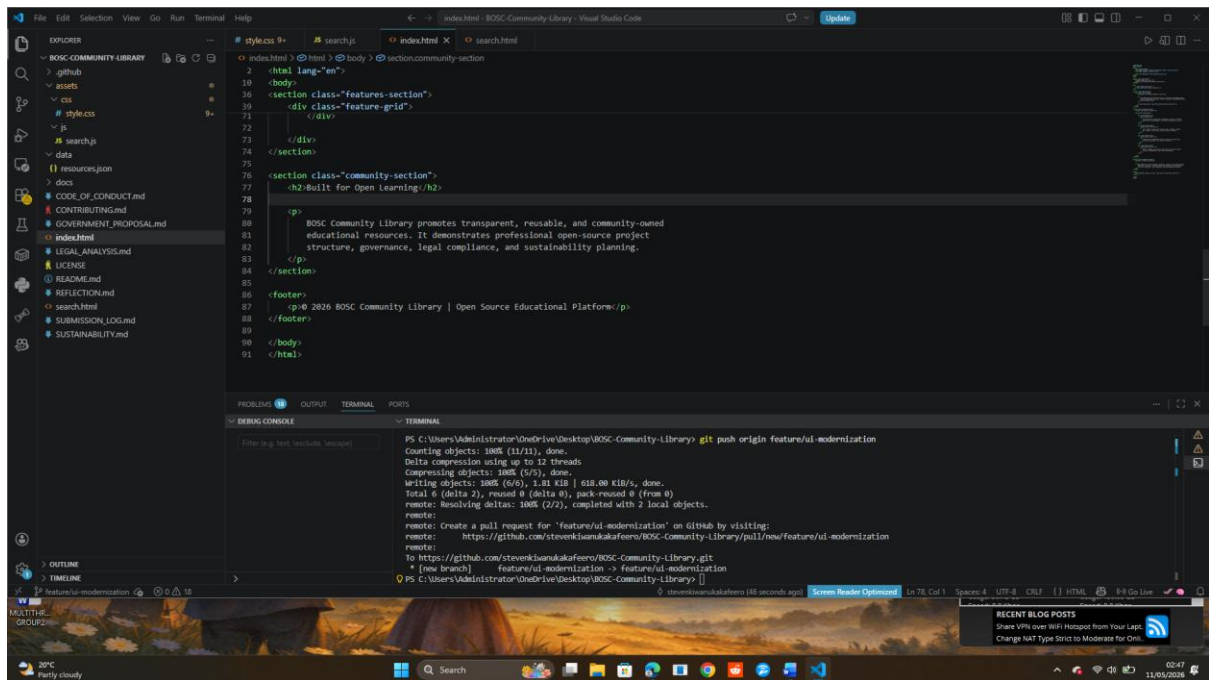

Better

Animations

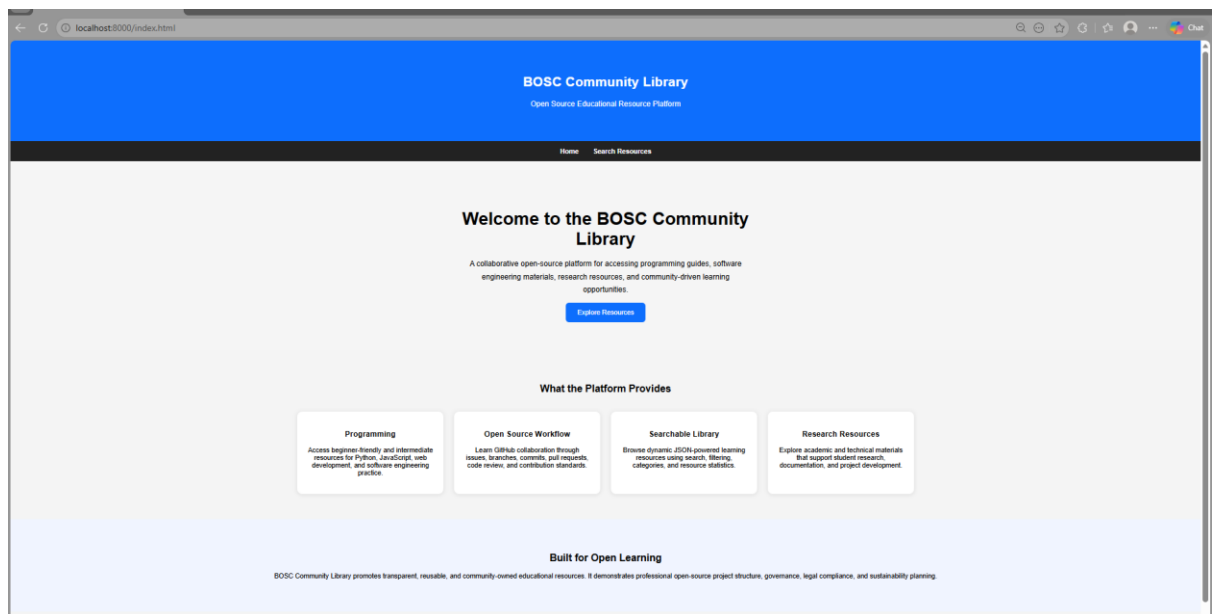

Synchronised the repositories local = online

Improving the index.html and css

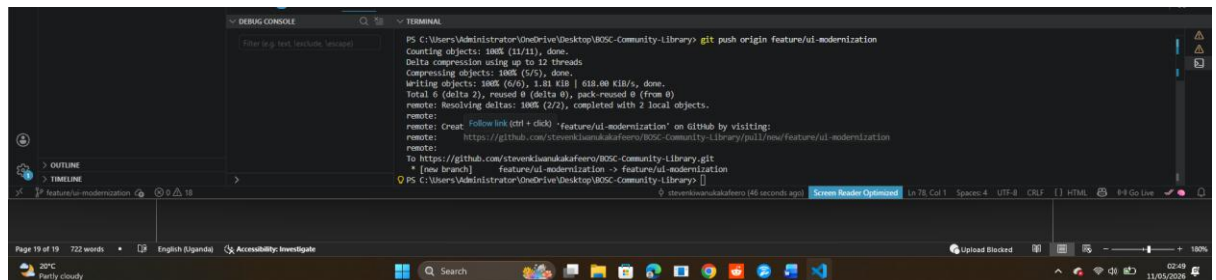

When viewed on the local host:

Git add.

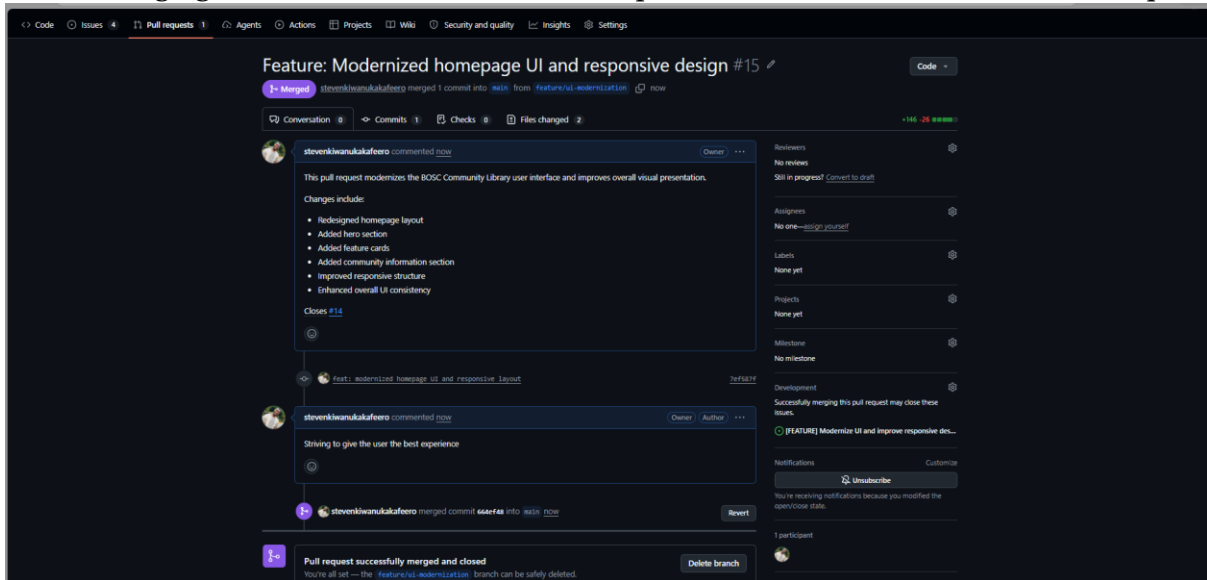

Git push the changes and merging

Merging

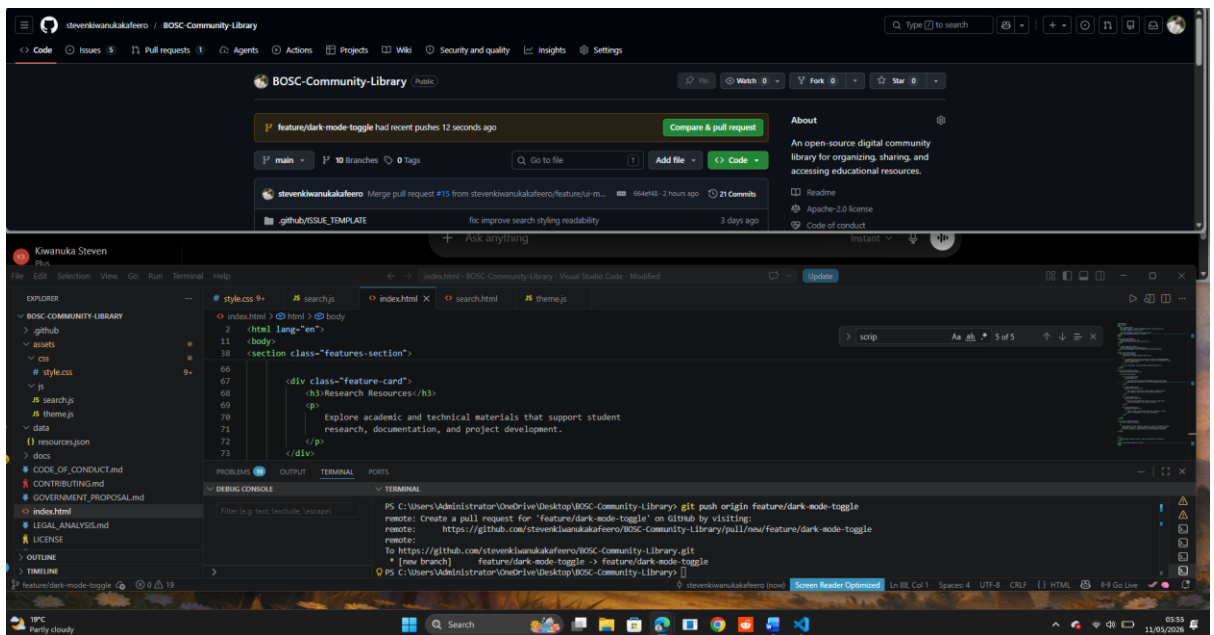

pull

request

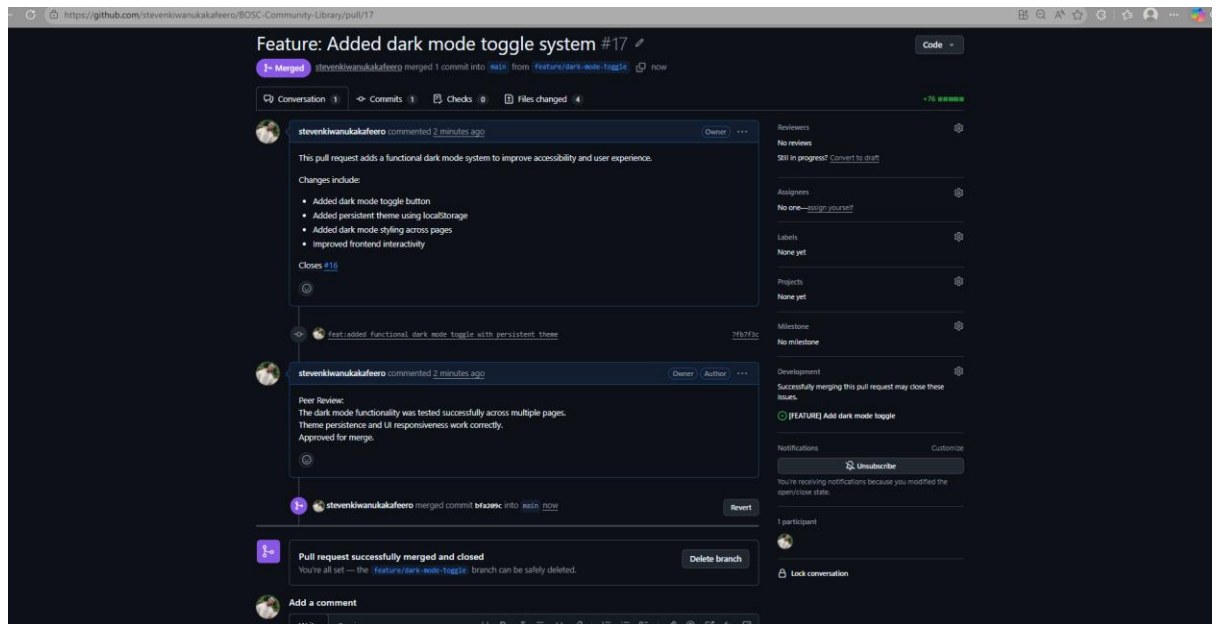

Schronise the local repository again after pushing changes

Another feature for dark mode toggle

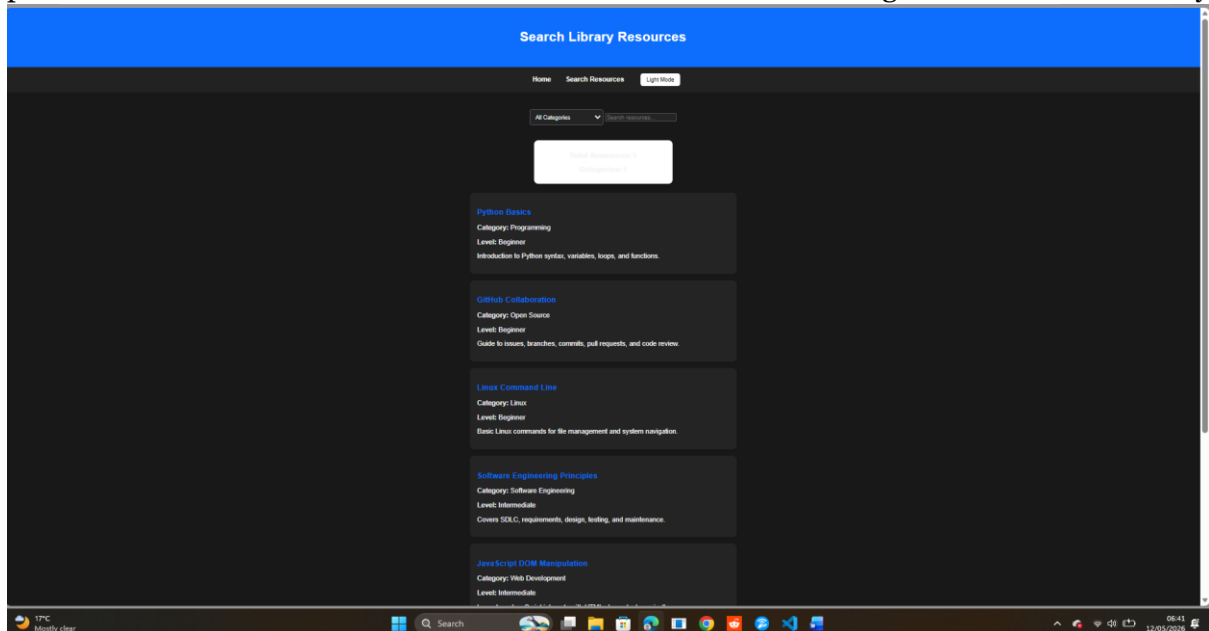

Finished working with Dark mode

Now merging

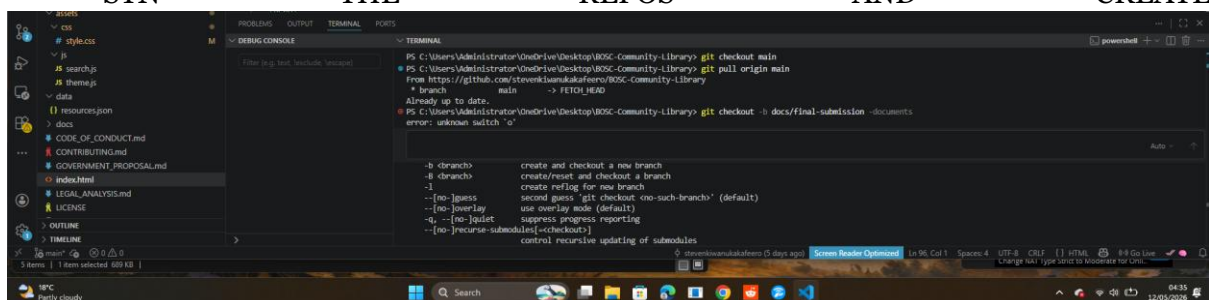

peer comment added and merged successfully

stevenkiwanukakafeero / README.md

Hi! I'm STEVEN KIWANUKA KAFEERO - Final year student at Bugema University as 2026. Pursuing A Bachelor of Sciences In Software Engineering

- I'm interested in CODING, ROBOTICS,ARTIFICIAL INTELLIGENCE AND POLITICS.
- I'm currently learning MASTERING JAVA
- I'm looking to collaborate WITH OPEN ELEMENTS , OPENMRS, OSS Companies, SYMETRIX AV company AND OTHER COMPANIES THAT MIGHT IGINITE THE GIAT IN ME AND TO BUILDIND A MORE WHOLESUM IT WORLD.
- How to reach me ...+256779668768 OR kiwanukasteven21@gmail.com
- Pronouns: he/ him.
- Fun fact: ...The Lie" said to "the Truth", "Let's take a bath together, the well water is very nice". "The Truth", still suspicious, tested the water and found out it really was nice
- So they got naked and bathed. But suddenly, the Lie leapt out of the water and fled, wearing the clothes of the Truth.

The Truth, furious, climbed out of the well to get her clothes back. But the World, upon seeing the naked Truth, looked away, with anger and contempt. Poor Truth returned to the well and disappeared forever, hiding her shame.

Since then, the Lie runs around the world, dressed as the Truth, and society is very happy ... because the world has no desire to know the naked Truth."

Pull Shark

x2

@stevenkiwanukakafeero opened pull requests that have been merged.

History

- Bronze unlocked - First unlocked on Apr 30
- [stevenkiwanukakafeero/OpenCare-Core#1](#) - 2nd pull request merged
- [stevenkiwanukakafeero/BOSC-Community-Library#6](#) - 16th pull request merged

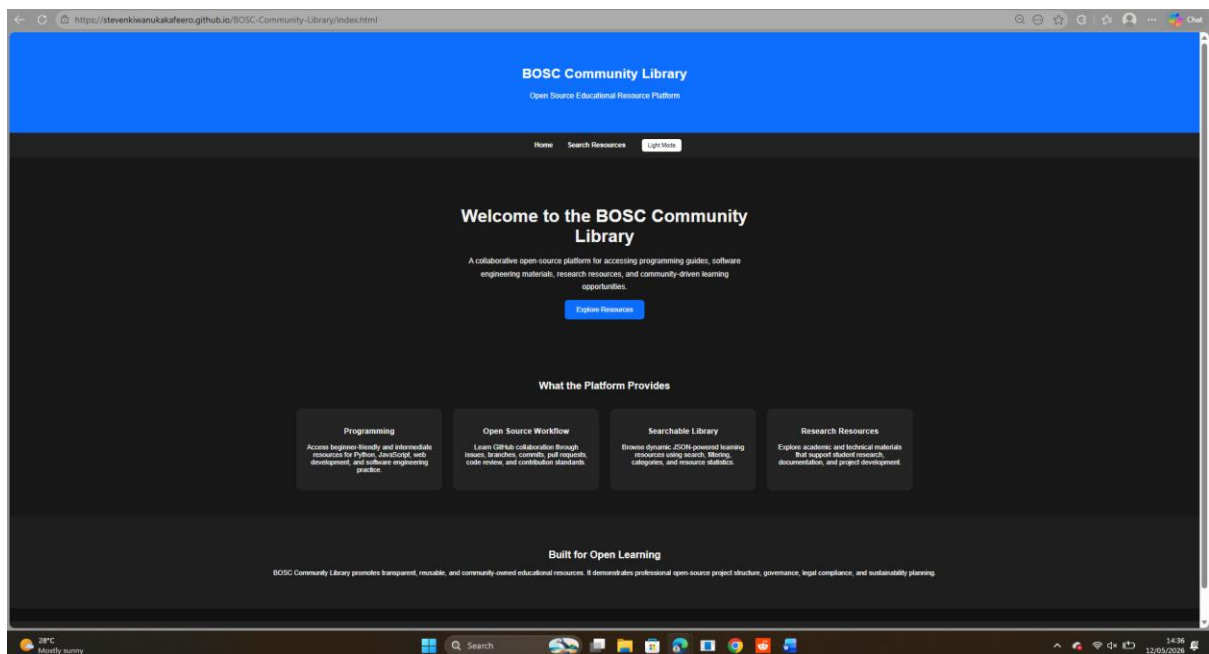

Quickdraw

and a *2 for pull shark after my core java concepts being merged in OpenCare and Bosc

Finally, I have hosted it on gitpages

[BOSC Community Library](https://stevenkwanakafeero.github.io/BOSC-Community-Library/index.html)

Conclusion

The BOSC Community Library project successfully fulfilled the objectives of the BSCT 3221 Open Source Software take-home examination by combining technical development, professional GitHub workflows, and open-source governance practices. Throughout the project, the system evolved from a simple static webpage into a responsive and interactive educational platform featuring dynamic JSON resource management, search and filtering functionality, statistics dashboards, responsive layouts, and dark mode support. The project also demonstrated practical use of issue tracking, branching strategies, pull requests, peer review simulation, repository maintenance, and documentation standards. Overall, the experience strengthened my understanding of collaborative software development and sustainable open-source project management.
